Professional Summary

Full-stack developer and automation specialist experienced in React, Next.js, Node.js, JavaScript, Python, Headless CMS (Strapi). Strong track record building REST API-driven applications, automating workflows, and deploying to cloud (DigitalOcean) with Linux, NGINX, reverse proxies, fail2ban, and TLS via Let's Encrypt certbot. Hands-on with CI/CD (GitHub Actions), containerization (Docker, Portainer), monitoring (Grafana), and secure server hardening (SSH keys, UFW, MFA/TOTP, Disabled Root Login, Disabled Password Auth etc.). Delivered measurable impact, including automations that eliminated 8+ hours of weekly manual effort. Led end-to-end Zoho Suite implementation and cross-platform integrations. Known for mentoring new hires and fostering team growth. Open to learning AWS, Azure, and GCP – (Have a secured Linux VPS running currently with NGINX as the webserver and reverse proxy, fail2ban and logging)

Core Skills

Languages & Frameworks: JavaScript, Node.js, React, Next.js, Python, Go

Web & APIs: REST APIs, Strapi (Headless CMS), Flask, ShadCN UI, JSON, Webhooks, OAuth2

Cloud & DevOps: DigitalOcean, Linux (Ubuntu Server), NGINX, Reverse Proxies, fail2ban, Let's Encrypt certbot, Docker, Portainer, Grafana

CI/CD & Tooling: Git, GitHub Actions (build & redeploy on push), Bash scripting, Documentation & SOPs

Databases: SQL, Design, Normalization

Business Platforms: Zoho Suite (implementation & integration), NinjaRMM, Rewst (automation), Halo PSA

Practices: Agile, Project Planning, Stakeholder Communication, Knowledge Sharing/Training, Security Hardening

Professional Experience

ESA Partner — Development & Automation Owner | Project Manager | Senior Support Specialist

Feb 2023 – Present | Cape Town, South Africa

- Led full Zoho Suite implementation and project planning; integrated Zoho Desk into Rewst as the master automation controller using a bundled OpenAPI definition.
- Designed and deployed automation workflows in Python with REST API integrations (Zoho Desk, Rewst, NinjaRMM) to streamline service operations.
- Built "Directo-Bot" to automatically sync contacts across hundreds of Yeastar P & S Series PABX phones, eliminating 8+ hours of weekly manual updates and removing error risk.
- Implemented OAuth2 authentication for NinjaRMM EU via Grafana Infinity plugin and standardized secure credential handling.
- Architected containerized internal test environments with Docker Swarm, Portainer, and monitoring via Prometheus/Grafana.
- Deployed and operated applications on DigitalOcean using Ubuntu Linux, NGINX, reverse proxies, fail2ban, and TLS via Let's Encrypt certbot; authored SOPs for hardened configuration.
- Took initiative to train new hires and share knowledge across teams, contributing to onboarding success and team cohesion.

xneelo — IT Administrator

Jul 2021 – Jul 2022 | Cape Town, South Africa

- Automated IT administration processes with Python; owned onboarding/offboarding workflows and device provisioning with MDM.
- Contributed to Agile delivery practices and supported enterprise systems at scale.

Gerber Botha & Gowar Inc — System Administrator & Technical Support

Feb 2019 – Jul 2021 | Cradock, South Africa

- Managed Windows/Linux servers and VMs (AD, DHCP, Terminal Services); implemented backups and disaster recovery; enabled remote work during COVID-19 under constrained connectivity.

Earlier Experience — Technical Support & Internships (Bizfolio Technologies; Divergent Technologies; RRZ Innovations)

- Provided L1–L3 support, networking assistance, and web/software development exposure; built foundational troubleshooting and coding skills.

Selected Projects (GitHub: github.com/MagicFishgit)

Directo-Bot — Automation syncing contacts across Yeastar P & S Series PABX phones at scale; fully unattended; removed 8+ hrs/week of manual updates for client teams.

magicfish.dev-v2 — Portfolio site with ReactJS, Node.js, Sanity (headless CMS); component-driven architecture and modern styling (SCSS).

magicfish.dev — Flask/Jinja/Bootstrap personal site; demonstrates Python back-end and templating fundamentals.

prettyweather — Weather UI integrating OpenWeather REST API; focus on clean UX.

floppyAI — Flappy Bird clone using ML to optimise gameplay; experimentation and algorithmic thinking.

Education & Certifications

Higher Certificate in Information Systems (Software Development) — Pearson CTI

Google IT Automation with Python — Coursera

Golang Programming — Udemy

Certified Yeastar P & S Series PABX Technician

MS900

Rewst Certified Automation Engineer

Yeastar P & S Series Certified Technician

Selected Achievements

- Eliminated 8+ hours of weekly manual work through telephony contact-sync automation (Directo-Bot); improved accuracy and auditability.

- Designed, Led and Implemented a full project process across all departments to streamline, document and improve delivery to clients. Improvement from this resulted in instead of barely being able to handle 2 projects to concurrently handle 33 projects.

- Restored company-wide data after a major legacy system failure with minimal downtime through disciplined backup and recovery procedures.
- Introduced standardised documentation and handover processes improving project throughput and cross-team clarity.
- Mentored new hires and contributed to team development beyond formal responsibilities.
